

Global Search

(Document No: 5.12)

The global search functionality allows the end-user to perform search operations within Golive. It searches across multiple forms for records that match a word or phrase that you type in the search area.

Here user can search users, Content, Relations, Groups & #Tag. By default, it shows the list of recently searched things.

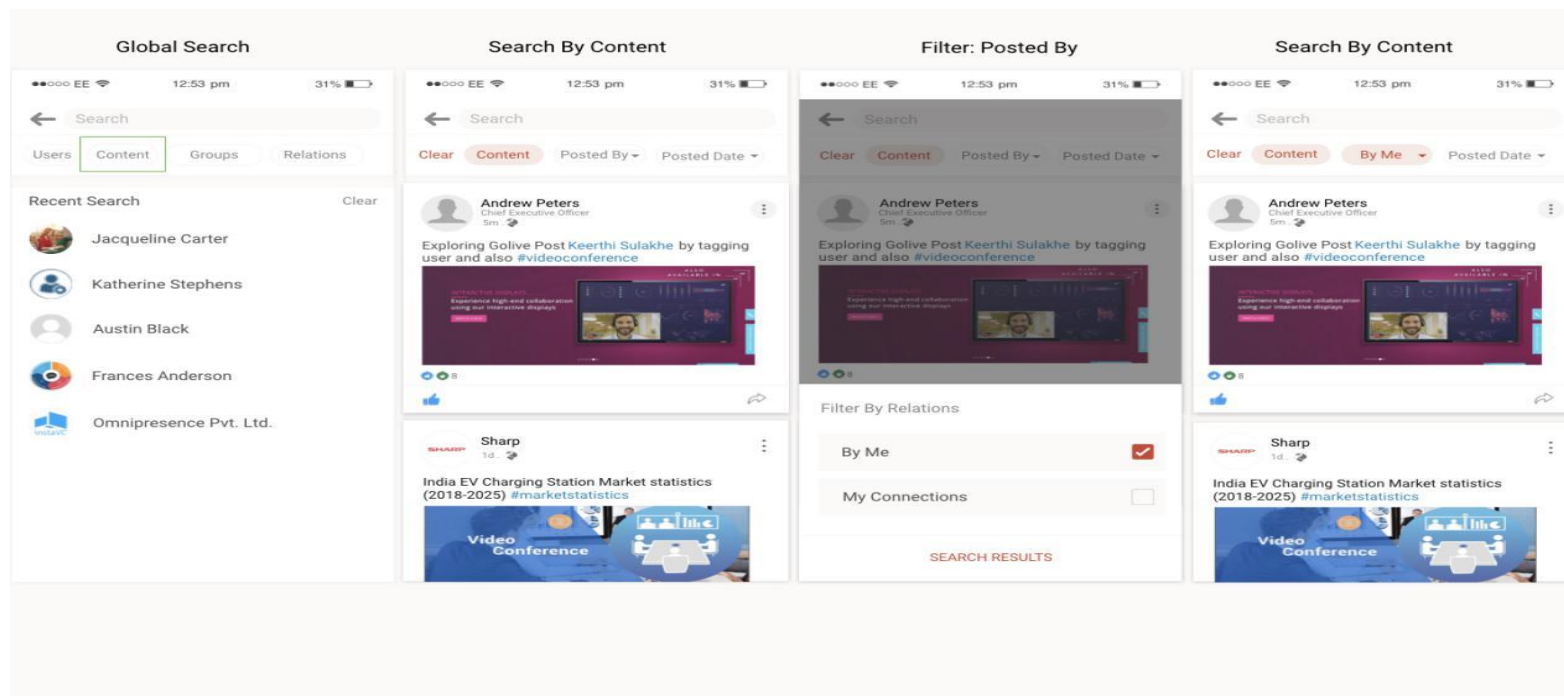

Users

Here user can search people's on golive & his own connections. By default, it shows all users on golive. They can also apply filter to search People's on golive by connection. Whoever is not connected in that list, it will show a connect icon in the list in front of that user & And When user click on any user, it will open that user profile.

Users Filter

> By Connection

- My Connection

Content

Here user can search Content posted on golive. By default, it shows recently posted posts. They can also apply filter to search content on golive by posted date & posted by. When user click on any content it will open that content and content information like reactions on post, reacted people list etc.

Reactions

Relations

User can search their relations on golive. By default, it shows company with recent search on golive. But user can apply filter to search relations on golive by Partner & Distributors help. They can select any relations from the list and visit to company profile.

Relation Filter

> Either Filter By Partners

- Partner List

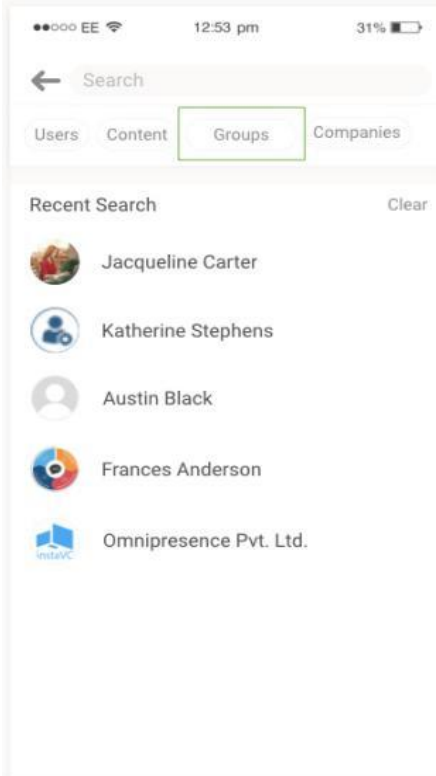

> Either filter by Distributors

- Distributors List

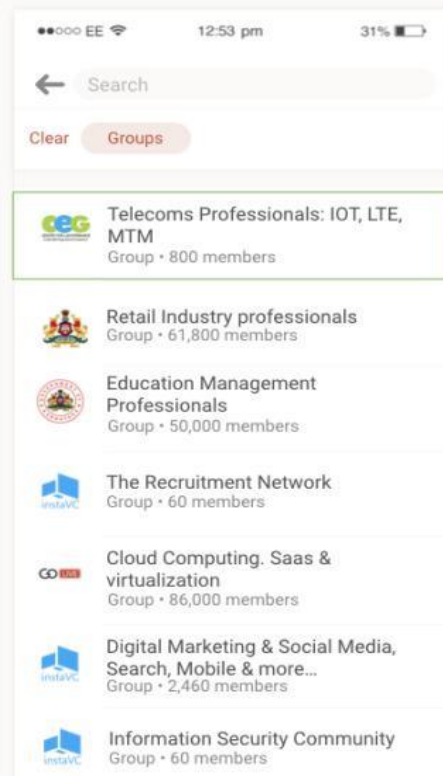

> Either filter by Both

- Partner & Distributors List

Global Search

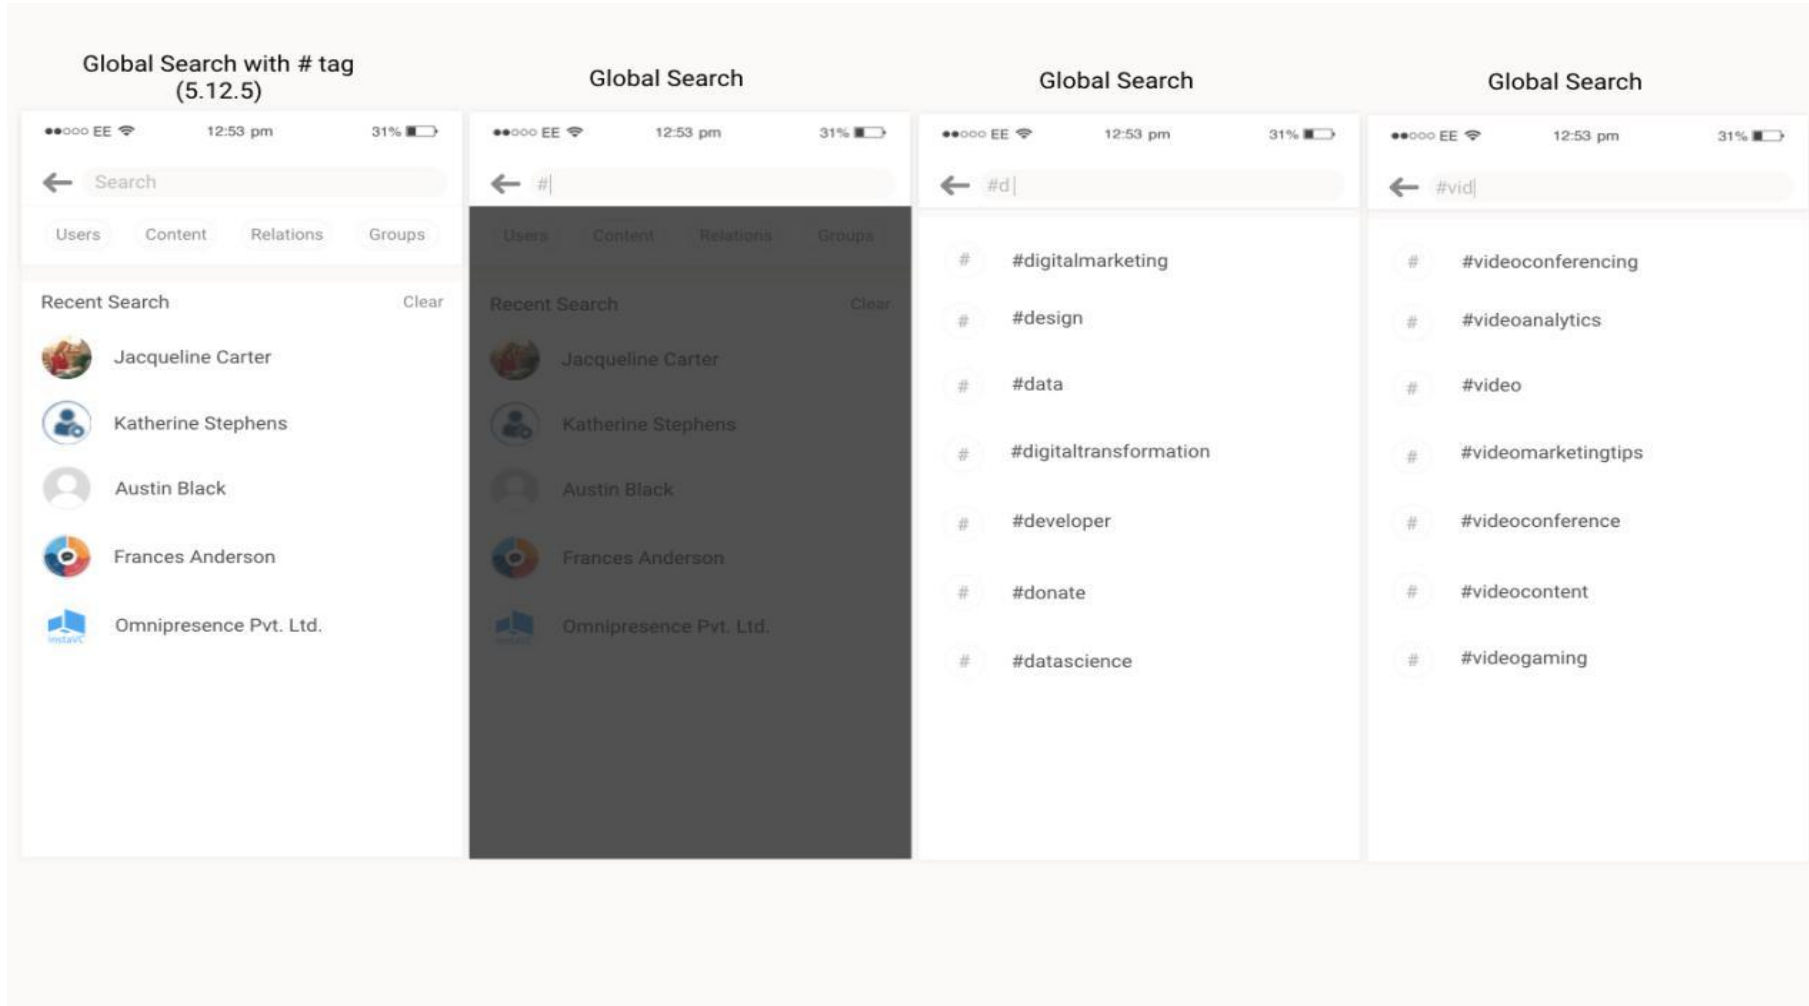

Search By Groups

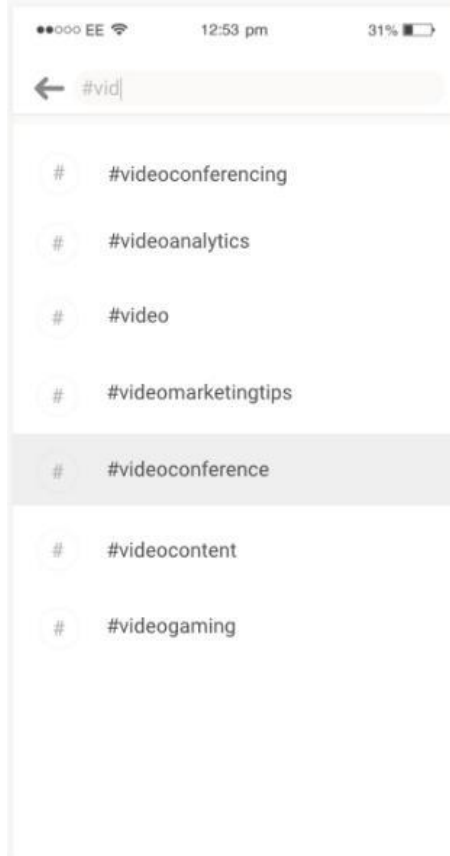

If user clicks directly, it opens
Group Page

Group

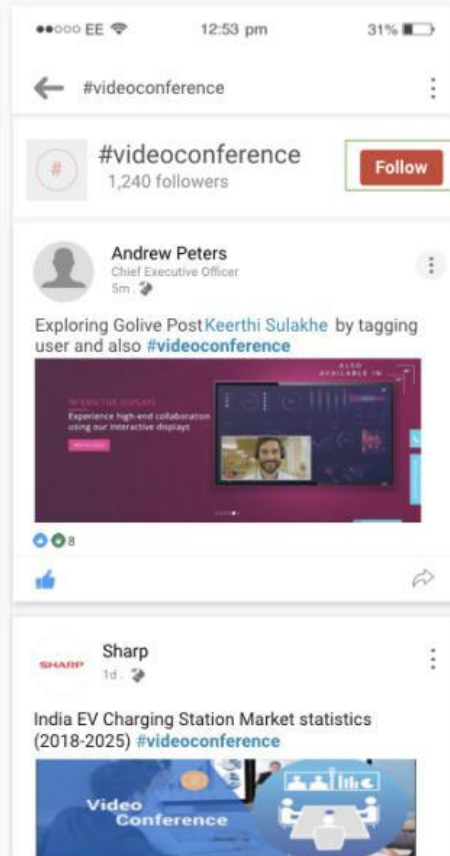

User can search the group list here by typing group name by default is show recently searched group or groups with whom user is connected. Once user select any group from the list they can visit group post and can see there post and can also connect to that group.

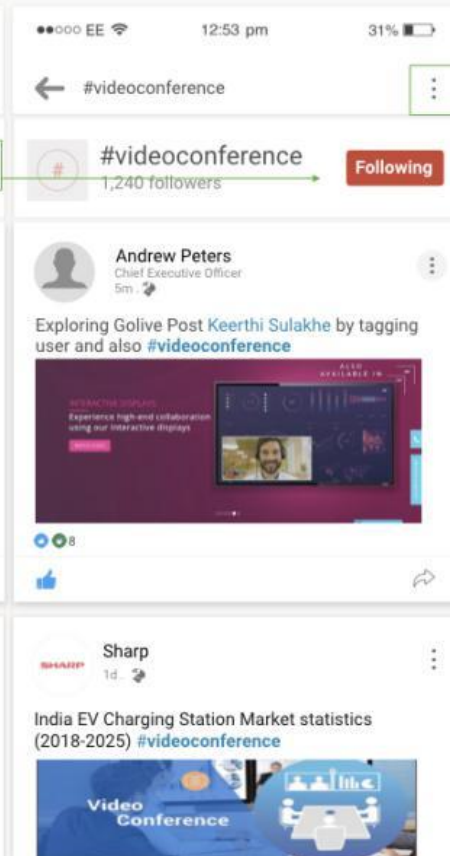

Global Search with # Tag

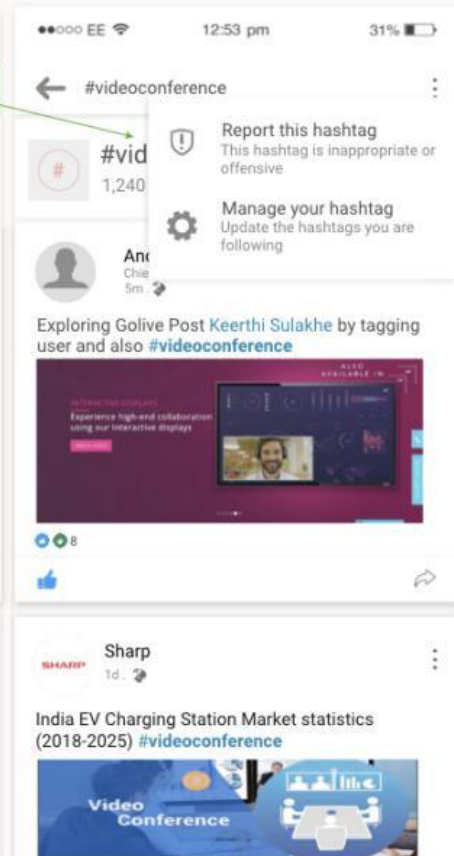

Open # Tag Page with all posts & Follow Button to receive notification (5.12.6)

Open # Tag Page with all posts & Follow Button to receive notification

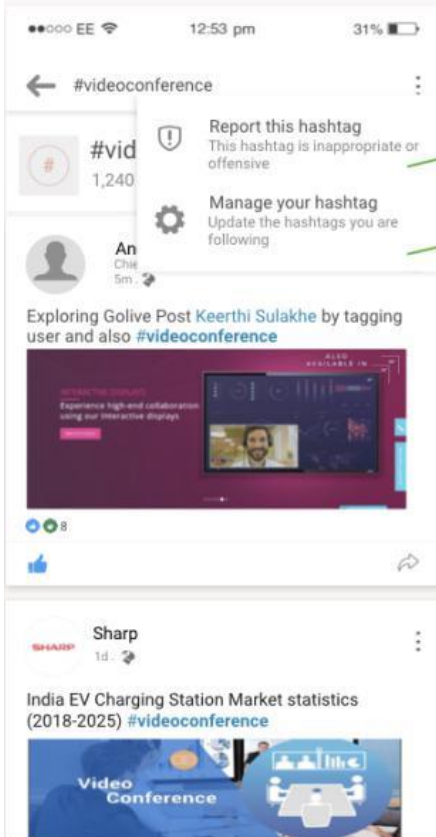

Option to report about the Hashtag

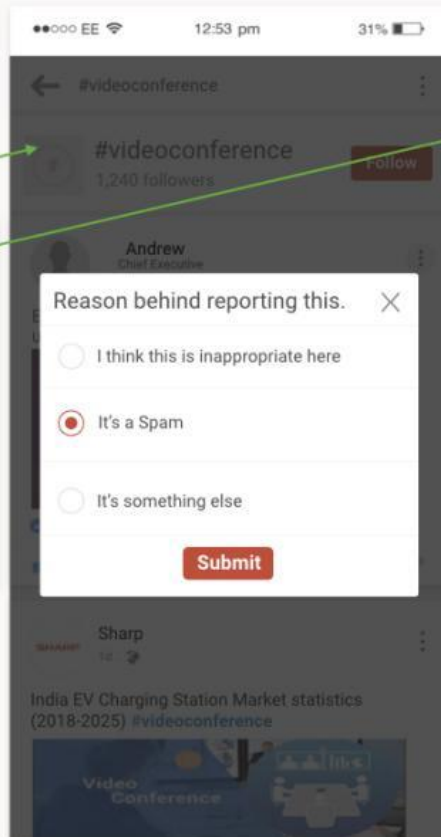

When # Tag is clicked, it opens all relevant posts which has this #tag in it.

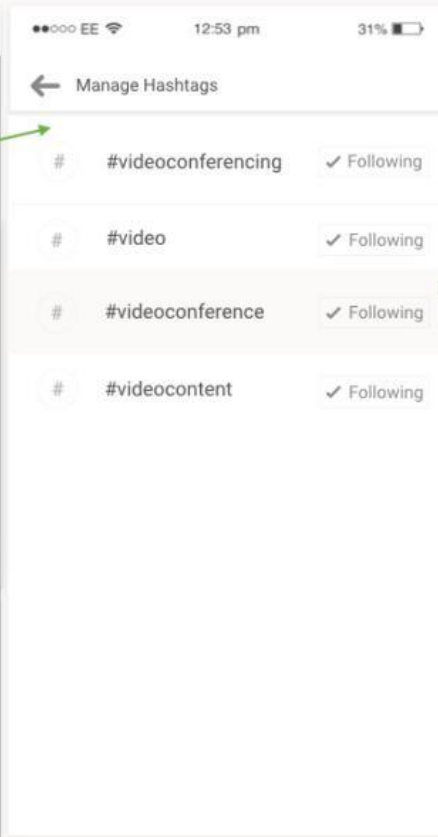

Option to report about the Hashtag

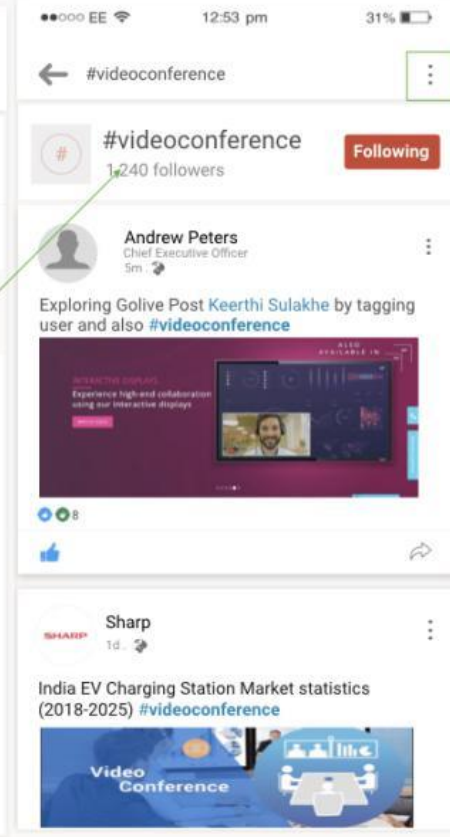

Option to report about the Hashtag

Option to Manage Hashtags we are already following

Open # Tag Page

#Tag

To search some content related to keyword #tag is used. By putting # tag user will get the most searched Keyword or user can select content according to inputs. Once the user will select some keyword he can go to that keyword page and follow that keyword for getting notification related to the keyword. In # tag user will get few options also related to keyword like Report the hashtag & Manage your hashtag.

Report The Hashtag

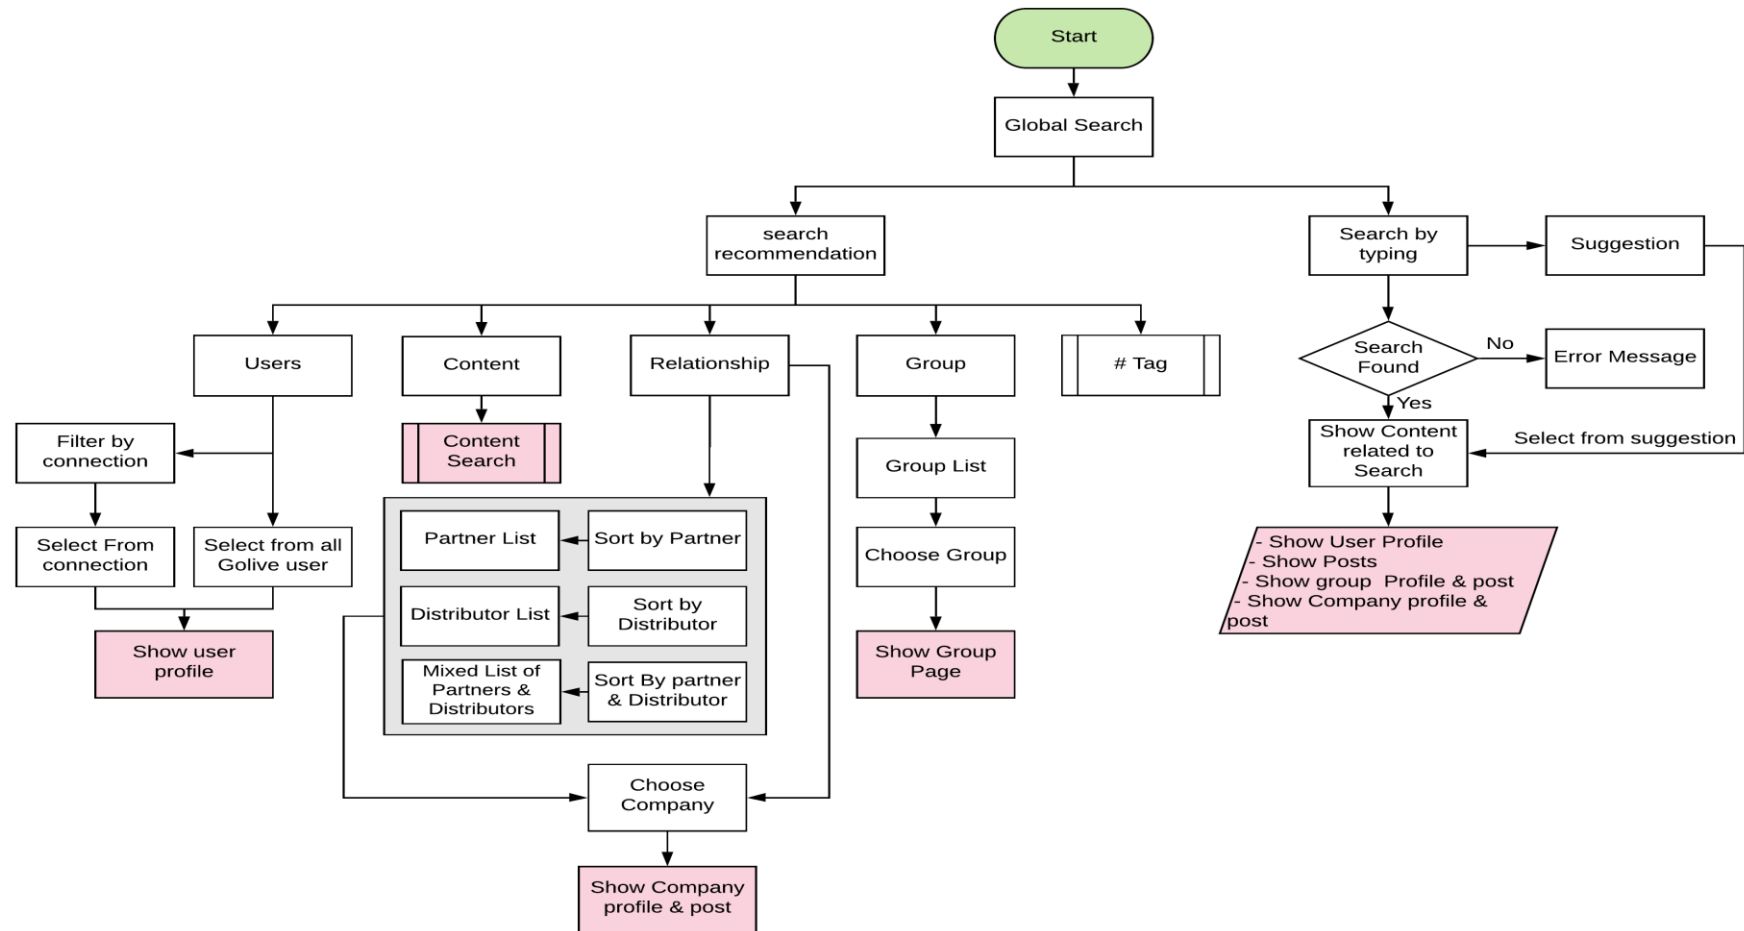

It allows user to report for that keyword. It has following option for reporting a keyword.

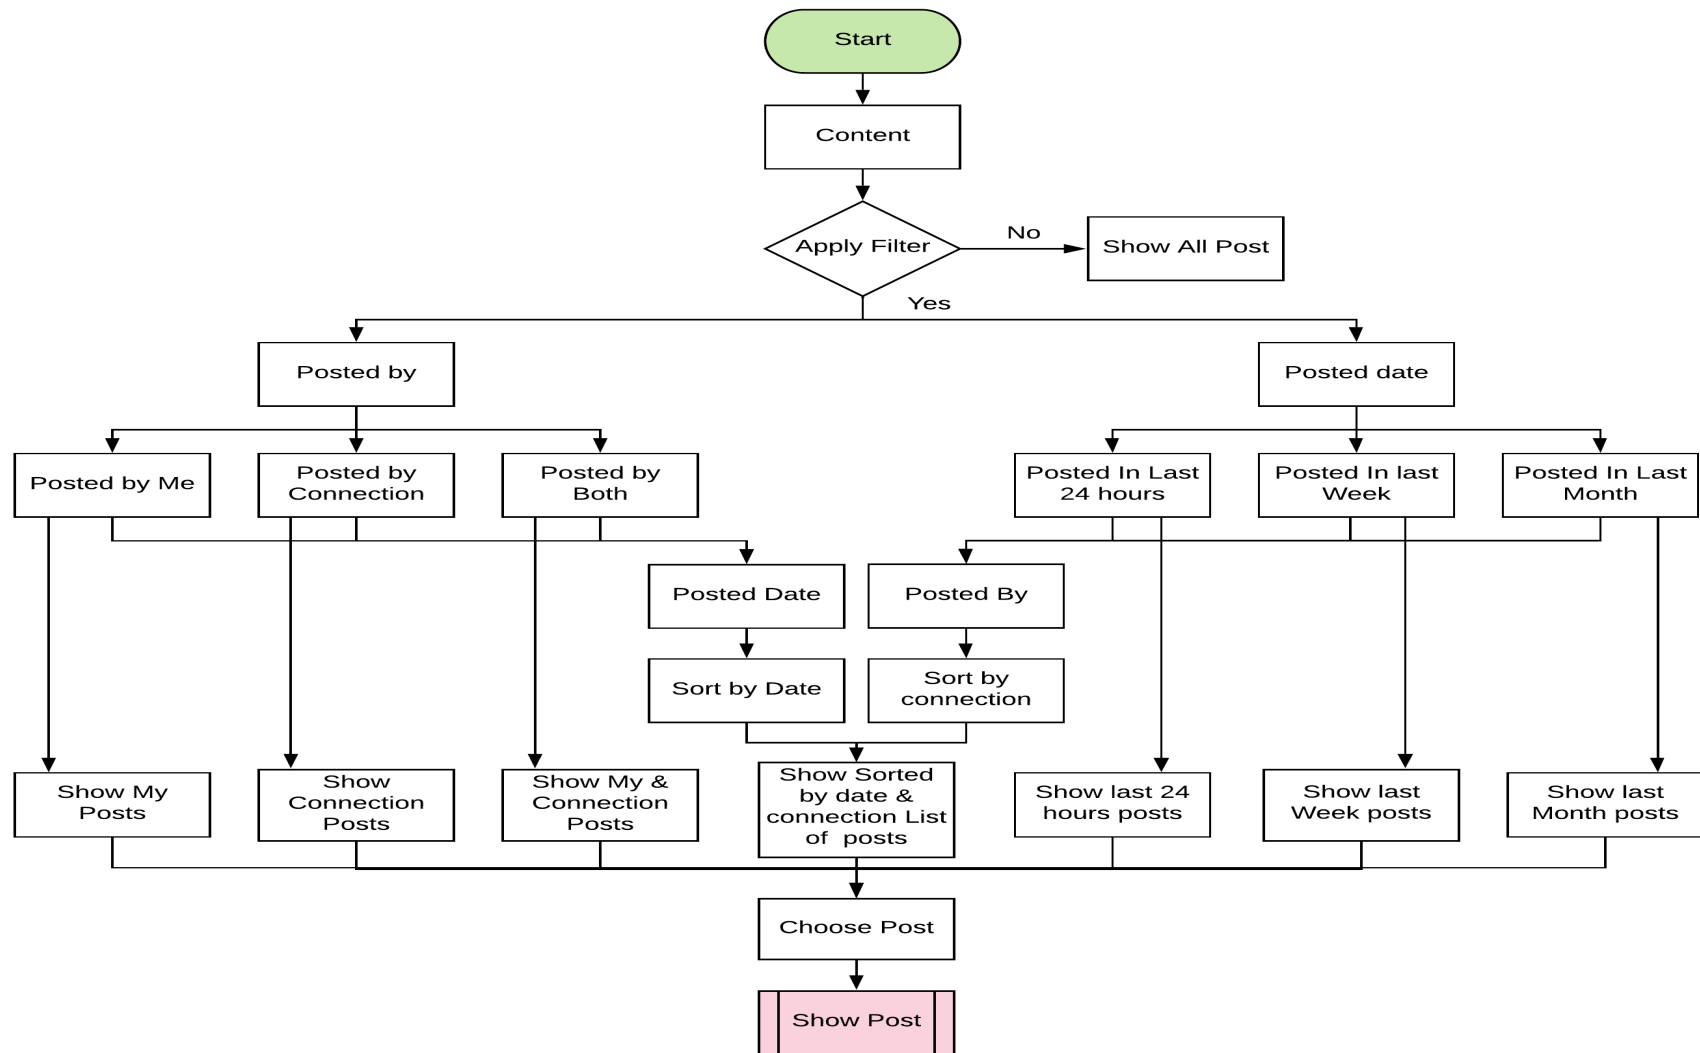

- I think this is inappropriate here
- It's something else
- It's a Spam

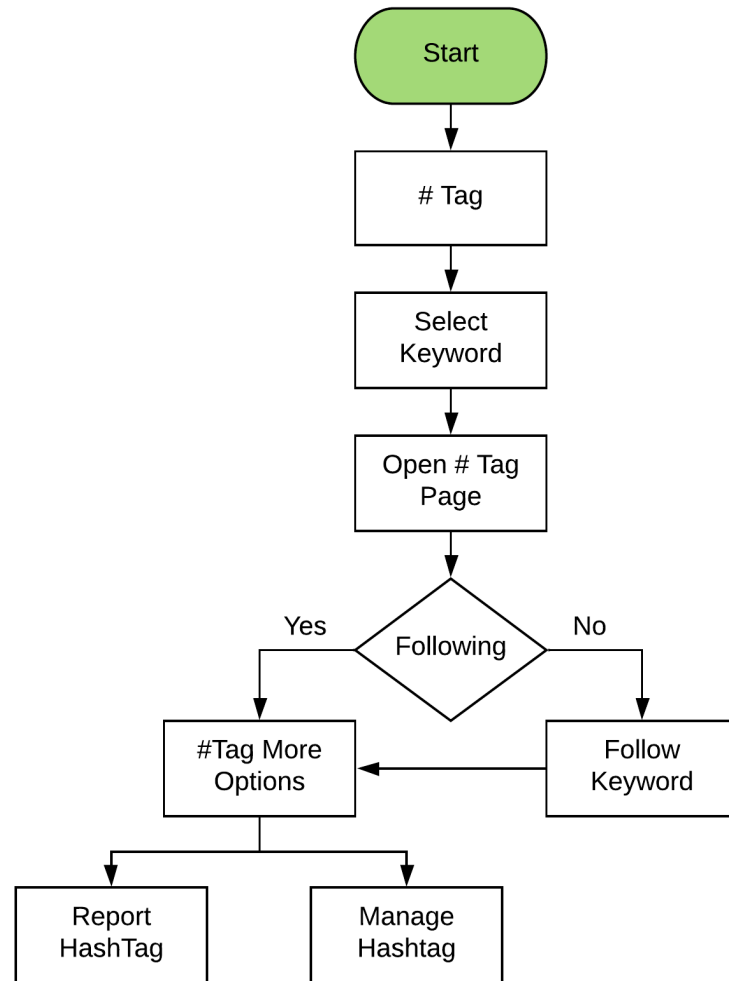

Manage Your Hashtag

It will provide the list of #tag following by user them. From here he can Unfollow a keyword also.
